## How to Read the Institutional Profile Report

This Your First College Year (YFCY) Institutional Profile provides valuable information on students' academic and campus life experiences during their first year in college for students at your institution compared to all who took the survey. This report provides information that can be used for student assessment activities, accreditation and self-study reports, campus planning, and policy analysis. Separate profile reports are generated for first-time full-time freshmen, non-first-time full-time students, and all respondents. First-time, full-time freshmen are defined as those respondents who first entered college in 2020 or 2021 and are currently enrolled full-time.

**Comp 1** – The first comparison group is based on your institution's type and control.

**Comp 2** – The second comparison group is based on a similar grouping of institution type and control.

**CIRP construct** – Items that are included in the measurement of a construct are indicated here.

**Mean** – The arithmetic mean is computed for each survey item based on the response options. Response options are given numeric values and are listed in descending order (i.e., 4=Essential, 3=Very Important, 2=Somewhat Important, 1=Not Important).

**Statistical significance** – Uses t-test to examine the difference between the mean score for your institution and the comparison group. Items with mean differences that are larger than would be expected by chance are noted with one, two, or three stars, which correspond to the three standard levels of significance (\*p < .05, \*\*p < .01, and \*\*\*p < .001). Statistical significance measures the extent to which a difference is occurring by chance, not the extent to which a difference is important. Large sample sizes (like those in the comparison groups) tend to generate statistical significance even though the magnitude of the difference may be small and not practically significant. In order to provide additional context to statistical significance, effect sizes are provided.

**Effect size** – Determines the practical significance of the mean difference between your institution and the comparison group. It is calculated by dividing the mean difference by the standard deviation of the comparison group. Generally, an effect size of .2 is considered small, .5 medium, and .8 large. A positive sign indicates that your institution's mean is greater than the mean of the comparison group; a negative sign indicates your mean is smaller than the mean of the comparison group. Note that a negative effect size is sometimes preferred (e.g., a negative effect size on "Since entering college, how often have you felt unsafe on this campus" suggests fewer students at your institution reported this was the case).

**Standard deviation** – Measures the variability around the mean. A small standard deviation indicates that the responses to the item tend to be very close to the mean, whereas a large standard deviation indicates that the responses are spread over a larger range of response options.

## How to Read the Longitudinal Profile Report

The Your First College Year (YFCY) survey was designed as a follow-up survey to the annual CIRP Freshman Survey (TFS). This report allows you to evaluate the academic and personal development of students in their first college year and to assess the impact of institutional programs, policies, and practices on the students' experiences and outcomes. Longitudinal Reports are based on matched pairs, using only students who responded to the survey items on both the TFS and the YFCY.

**Comp Group 1** – The first comparison group is based on your institution's type and control.

**Comp Group 2** – The second comparison group is based on a similar grouping of institution type and control.

**Mean** – The arithmetic mean is computed for each survey item based on the response options. Response options are given numeric values and are listed in descending order (i.e., 3= Frequently, 2=Occasionally, 1=Not at all).

**Statistical significance** – Uses the t-test to examine the difference between the mean responses on the TFS and the YFCY. Items with mean differences that are larger than would be expected by chance are noted with one, two, or three stars, which correspond to the three standard levels of significance (\*p< .05, \*\*p< .01, and \*\*\*p< .001). Statistical significance measures the extent to which a difference is occurring by chance, not the extent to which a difference is important. Large sample sizes (like those produced in comparison groups) tend to generate statistical significance even though the magnitude of the difference may be small and not practically significant. In order to provide additional context to statistical significance, effect sizes are provided.

**Effect size** – Determines the practical significance of the mean difference between the TFS and the YFCY. It is calculated by dividing the mean difference by the standard deviation of the comparison group. Generally, an effect size of .2 is considered small, .5 medium, and .8 large. A positive sign indicates that your institution's mean is greater than the mean of the comparison group; a negative sign indicates your mean is smaller than the mean of the comparison group. Note that a negative effect size is sometimes preferred (e.g., a negative effect size on "Since entering college, how often have you felt unsafe on this campus" suggests fewer students at your institution reported this was the case).

**Standard deviation** – Measures the variability around the mean. A small standard deviation indicates that the responses to the item tend to be very close to the mean, whereas a large standard deviation indicates that the responses are spread over a larger range of response options.

CIRP Surveys are comprehensive, covering a wide range of topics that research has shown are impacted by the college experience. CIRP Theme R these reports illustrate what contributes to specific areas of interest on campus and to facilitate discussion on your campus. Although the survey item to your institution, its mission, programs, or goals. We encourage you to review your entire Institutional Profile for additional results of specific interest those respondents who first entered college in 2020 or 2021 and are currently enrolled full-time.

**Theme Description** – Provides a brief definition of the topics covered by the theme.

**Summarized Frequencies** – Full results for all items are provided in the Institutional Profile Report.

**Mean** – The arithmetic mean is computed for each survey item based on the response options. Response options are given numeric values and are listed in descending order (i.e., 5=Much Stronger, 4=Stronger, 3=No Change, 2=Weaker, 1=Much Weaker).

**Academic Outcomes** illustrates changes to academic skills and abilities during college and how students' academic skills compare to their peers. **Statistical Significance** – Uses t-test to examine the difference between the mean score for your institution and the comparison group. Items with mean differences that are larger than would be expected by chance are noted with one, two, or three stars, which correspond to the three standard levels of significance (\*p<.05, \*\*p<.01, and \*\*\*p<.001). Statistical significance measures the extent to which a difference is occurring by chance, not the extent to which a difference is important. Large sample sizes (like those in the comparison groups) tend to generate statistical significance even though the magnitude of the difference may be small and not practically significant. In order to provide additional context to statistical

**Effect Size** – Determines the practical significance of the mean difference by the standard deviation of the comparison group. It indicates that your institution's mean is greater than the mean of the comparison group. Note that a negative effect size is sometimes "unsafe on this campus" suggests fewer students at your institution

and not practically significant. In order to provide additional context to statistical significance, effect sizes are provided.

## Theme Reports

Theme reports combine relevant items together for easy access. By examining these items together, items were included because they relate to the theme, the item(s) may not be the most important item on your campus. Theme reports are generated for first-time, full-time freshmen as defined as

Items: Active and Collaborative Learning, Academic Enhancement Experiences, Written and Oral Communication.

**Comp 1** – The first comparison group is based on your institution's type and control.

**Comp 2** – The second comparison group is based on a similar grouping of institution type and control.

**Standard Deviation** – Measures the variability around the mean. A small standard deviation indicates that the responses to the item tend to be very close to the mean, whereas a large standard deviation indicates that the responses are spread

difference between your institution and the comparison group. It is calculated by dividing the group. Generally, an effect size of .2 is considered small, .5 medium, and .8 large. A positive sign of the comparison group; a negative sign indicates your mean is smaller than the mean of the group preferred (e.g., a negative effect size on "Since entering college, how often have you felt on reported this was the case).
